EXAMINER

RAYYAN, SUSAN F

ART UNIT

PAPER NUMBER

2167

NOTIFICATION DATE

DELIVERY MODE

04/01/2009

ELECTRONIC

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

roks@microsoft.com  
ntovar@microsoft.com

<b>Office Action Summary</b>	<b>Application No.</b> 10/749,936	<b>Applicant(s)</b> BREWER ET AL.	
	<b>Examiner</b> SUSAN FOSTER RAYYAN	<b>Art Unit</b> 2167	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 26 January 2009.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1,3-7,10-17,20,21,23-25 and 27-39 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,3-7,10-17,20-21, 23-25,27-39 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 26, 2009 has been entered.
2. Claim 39 is newly added. Claims 2,8-9,18-19, 22, 26 are canceled.
3. Claims 1,3-7,10-17,20-21, 23-25,27-39 are currently pending.

### ***Specification***

4. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The amended claims include a substituted term "query replacement option". Examiner was unable to identify the location of the term "query replacement option" in the specification. The previous term "query refinement option" was found throughout the specification.

### ***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 2167

6. Claim 28 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Examiner was unable to locate a written description of a query replacement option list is semi-transparent. Examiner has interpreted as a query replacement option list.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. **Claim 1,3,6-7,10,12-15,17,20, 38,39 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent Number 6,564,213 issued to Ruben E. Ortega et al (“Ortega”) and US 2004/0143564 issued to William Gross et al. (“Gross”) and US Patent 6,947,930 issued Peter G. Anick et al (“Anick”).**

**As per independent claim 1** Ortega teaches:

a) defining one or more query related character patterns that do not include an explicit indicator of query submission (Figure 2A, Ref.No. 60, user types in SO);

Art Unit: 2167

b) monitoring entry of query defining characters by a user to detect entry of a defined query related character pattern (Figure 2A, displays the auto completion strings (replacement options) for "SO");

providing the user with one or more suggested query replacement options each time a defined query related character pattern is detected without requiring the user to provide the explicit indicator of the query submission" ( Figure 2A, Reference No. 62, auto completion strings (replacement options), Figure 2A- 2B and column 5, lines 23-36, Figure 2A displays the auto completion strings (replacement options) for "SO" , the terms and phrases (replacement options) are displayed and the user selects one and the replacement option replaces the "SO" (defined query related character pattern) it is added to the search field and at Figure 2B the display shows the incrementally updated auto completion strings (replacement options) for "SONY" and column 5, lines 46-51, user initiates search without moving stylus).

Ortega does not explicitly teach providing the user with an updated query result each time a defined query related character is detected without requiring the user to provide the explicit indicator of the query submission. Gross does teach this limitation (paragraph 10, lines 6-11, as immediately after each character in a search sting is entered by the user the user receives immediate feedback and paragraph 13, lines 4-14) to provide immediate feedback and so can decide on the desirability of entering additional search characters. It would have been obvious to a person of ordinary skill in the art at the time of the invention was made to modify Ortega with providing the user

Art Unit: 2167

with an updated query result each time a defined query related character is detected without requiring the user to provide the explicit indicator of the query submission to provide immediate feedback and so can decide on the desirability of entering additional search characters (paragraph 181, lines 5-9).

Ortega and Gross do not explicitly teach the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern. Anick does teach this limitation at (Figure 2 and column 8, lines 31-51, automatically provide user with a set of candidate terms which may be used as addition or replacement of initial query. Initial query of SPACE SHUTTLE returns a set of candidate terms such as CHALLENGER DISASTER.) It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross with the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern to build an improved query without analyzing documents within the initial group of ranked documents as described by Anick at column 8, lines 40-45.

Art Unit: 2167

**As per claim 3**, same as claim arguments above and Ortega teaches:

further comprising tracking results selected by one or more users and adjusting the suggested query replacement options based on a history of results previously selected by the one or more users (column 2, lines 30-35, most popular items in the database).

**As per claim 6**, same as claim arguments above and Ortega teaches:

wherein one defined query related character pattern is a string of characters followed by a space (Figure 2B).

**As per claim 7**, same as claim arguments above and Ortega teaches:

wherein one query related character pattern is a string of characters followed by a predefined time delay before additional characters are entered (column 2, lines 20-25).

**As per claim 10**, same as claim arguments above and Ortega teaches:

further comprising providing a user input that allows the user to adjust the query related character patterns (Figure 2A Reference 60).

**Claim 12 is** rejected based on the same rationale as claim 1.

**As per independent claim 13** Ortega teaches:

providing a user with one or more suggested query replacement options as the user enters query defining characters ( Figure 2A, Reference No. 62, auto completion strings (replacement options), Figure 2A- 2B and column 5, lines 23-36, Figure 2A displays the auto completion strings (replacement options) for “SO” , the terms and phrases (replacement options) are displayed and the user selects one and the replacement option replaces the “SO” ( query defining character) it is added to the search field and at Figure 2B the display shows the incrementally updated auto completion strings (replacement options) for “SONY” and column 5, lines 46-51, user initiates search without moving stylus).

b) detecting entry of a query defining word by the user without requiring a user to provide an explicit indicator of query submission (Figure 2B, displays results of the detecting (replacement options) for “SONY” and column 5, lines 46-51, user initiates search without moving stylus).

Ortega does not explicitly teach providing the user with an updated query results each time entry of a query defining word is detected without requiring the user to provide the explicit indicator of the query submission and wherein the query defining word includes a string of characters followed by a predefined time delay before additional characters are entered by the user. Gross does teach this limitation (paragraph 10, lines 6-11, as immediately after each character in a search sting is entered by the user the user receives immediate feedback and paragraph 13, lines 4-

Art Unit: 2167

14) to provide immediate feedback and so can decide on the desirability of entering additional search characters. It would have been obvious to a person of ordinary skill in the art at the time of the invention was made to modify Ortega with providing the user with an updated query result each time entry of a query defining word is detected without requiring the user to provide the explicit indicator of the query submission and wherein the query defining word includes a string of characters followed by a predefined time delay before additional characters are entered by the user to provide immediate feedback and so can decide on the desirability of entering additional search characters as described by Gross (paragraph 181, lines 5-9).

Ortega and Gross do not explicitly teach the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern. Anick does teach this limitation at (Figure 2 and column 8, lines 31-51, automatically provide user with a set of candidate terms which may be used as addition or replacement of initial query. Initial query of SPACE SHUTTLE returns a set of candidate terms such as CHALLENGER DISASTER.) It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross with the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern to build an improved query without analyzing documents within the initial group of ranked documents as described by Anick at column 8, lines 40-45.

Art Unit: 2167

**As per claim 14**, same as claim arguments above and Ortega teaches:

further comprising tracking queries entered by one or more users and adjusting the suggested query replacement options based on a history of queries previously entered by the one or more users(column 2, lines 20-24 and column 3, lines 10-12)..

**As per claim 15**, same as claim arguments above and Ortega teaches:

comprising tracking results selected by one or more users and adjusting the suggested query replacement options based on a history of results previously selected by the one or more users (column 2, lines 30-35, most popular items in the database).

**As per claim 17**, same as claim arguments above and Ortega teaches:

wherein one defined query related character pattern is a string of characters followed by a space (Figure 2B).

**Claim 20** is rejected based on the same rationale as claim 13.

**As per claim 38**, same as claim arguments above and Anick teaches:

Wherein the broadening suggestion does not includes the query related character pattern (Figure 2 and column 8, lines 31-51, Initial query of SPACE SHUTTLE returns a set of candidate terms such as CHALLENGER DISASTER.)

**As per claim 39** same as claim arguments above and Anick teaches:

replacing the one or more query related character patterns with at least one of the one or more suggested query replacement options (Figure 2 and column 8, lines 31-51, automatically provide user with a set of candidate terms which may be used as addition or replacement of initial query.)

**9. Claims 5, 21, 23-25, 27-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent Number 6,564,213 issued to Ruben E. Ortega et al (“Ortega”) and US 2004/0143564 issued to William Gross et al (“Gross”) and US Patent 6,947,930 issued Peter G. Anick et al (“Anick”) in view of US Publication Number 2006/0112178 issued to Taylor N. Van Vleet (“Van Vleet”).**

**As per claim 5**, same as claim arguments above and Ortega and Gross and Anick do not explicitly teach further comprising providing a visual indicator to the user when an updated query result list is provided to the user. Van Vleet does teach this limitation (paragraph 12, 30 and Figure 3, as highlighting the updated search results, Figure 3: “new search results since”) to personalize search result items. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Ortega and Gross and Anick with providing a visual indicator to the user each time the updated query result list is provided to the user to personalize search result items as described by Van Vleet (paragraph 12).

Art Unit: 2167

**As per independent claim 21** Ortega teaches:

- a) providing a user with replacement alternatives as the user enters query defining characters( Figure 2A, Reference No. 62 , auto completion strings (replacement options), Figure 2A- 2B and column 5, lines 23-36, Figure 2A displays the auto completion strings (replacement options) for “SO” and at Figure 2B the display shows the incrementally updated auto completion strings (replacement options) for “SONY”);
- b) detecting entry of a completed query defining word by the user (Figure 2B, displays results of the detecting (replacement options) for “SONY”);
- d) providing the user with query replacement options related to the query defining word without requiring the user to provide the explicit indicator of the query submission (Figure 2B, displays auto completion strings (replacement options) for “SONY” and column 5, lines 46-51, user initiates search without moving stylus) ( Figure 2A, Reference No. 62, auto completion strings (replacement options), Figure 2A- 2B and column 5, lines 23-36, Figure 2A displays the auto completion strings (replacement options) for “SO” , the terms and phrases (replacement options) are displayed and the user selects one and the replacement option replaces the “SO” (defined query related character pattern) it is added to the search field and at Figure 2B the display shows the incrementally updated auto completion strings (replacement options) for “SONY” and column 5, lines 46-51, user initiates search without moving stylus)

Art Unit: 2167

e) determining whether the user selects a provided query replacement option (column 5, lines 37-40, selecting and submitting the auto completion strings (selected replacement option) for searching).

Ortega does not explicitly teach providing the user with a query result list each time a query defining word is detected without requiring the user to provide the explicit indicator of query submission and providing the user with an updated query result list when it is determined that the user has selected a provided query replacement option. Gross does teach this limitation (paragraph 10, lines 6-11, as immediately after each character in a search sting is entered by the user the user receives immediate feedback and paragraph 13, lines 4-14) to provide immediate feedback and so can decide on the desirability of entering additional search characters. It would have been obvious to a person of ordinary skill in the art at the time of the invention was made to modify Ortega with providing the user with a query result list each time a query defining word is detected without requiring the user to provide the explicit indicator of query submission and providing the user with an updated query result list when it is determined that the user has selected a provided query replacement option to provide immediate feedback and so can decide on the desirability of entering additional search characters as described by Gross(paragraph 181, lines 5-9).

Ortega and Gross do not explicitly teach the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern. Anick does teach this limitation at (Figure 2 and column 8,

Art Unit: 2167

lines 31-51, automatically provide user with a set of candidate terms which may be used as addition or replacement of initial query. Initial query of SPACE SHUTTLE returns a set of candidate terms such as CHALLENGER DISASTER.) It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross with the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern to build an improved query without analyzing documents within the initial group of ranked documents as described by Anick at column 8, lines 40-45.

Ortega and Gross and Anick do not explicitly teach providing a visual indicator to the user each time the updated query result list is provided to the user. Van Vleet does teach this limitation (paragraph 12, 30 and Figure 3, as highlighting the updated search results, Figure 3: "new search results since") to personalize search result items. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Ortega and Gross and Anick with providing a visual indicator to the user each time the updated query result list is provided to the user to personalize search result items as described by Van Vleet (paragraph 12).

**As per claim 23**, same as claim arguments above and Ortega teaches:

wherein the updated query result list includes result listings from a user hard drive, an intranet server, and an Internet server (column 3, line 25-35).

**Claim 24** is rejected based on the same rationale as claim 21.

**As per independent claim 25** Ortega teaches:

a) a query entry text box for entering query defining characters (Figure 2A, search box, Ref.No. 60);

b) a query replacement option list including at least one of user selectable query replacement options( Figure 2A, Reference No. 62 , auto completion strings (replacement options)) that is incrementally updated as a query is entered into the query entry text box ... (Figure 2A- 2B and column 5, lines 23-36, Figure 2A displays the auto completion strings (replacement options) for “SO” and at Figure 2B the display shows the incrementally updated auto completion strings (replacement options) for “SONY”, user can initiate search without moving stylus away from the selected string) (column 5, lines 23-36, Figure 2A displays the auto completion strings (replacement options) for “SO” , the terms and phrases (replacement options) are displayed and the user selects one and the replacement option replaces the “SO” -it is added to the search field and at Figure 2B the display shows the incrementally updated auto completion strings (replacement options) for “SONY” .

Ortega does not explicitly teach a query result list that is incrementally updated as a query is entered into the query box without requiring the user to provide the explicit

Art Unit: 2167

indicator of the query submission. Gross does teach this limitation (paragraph 10, lines 6-11, as immediately after each character in a search sting is entered by the user the user receives immediate feedback and paragraph 13, lines 4-14) to provide immediate feedback and so can decide on the desirability of entering additional search characters. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Ortega with a query result list that is incrementally updated as a query is entered into the query box without requiring the user to provide the explicit indicator of the query submission to provide immediate feedback and so can decide on the desirability of entering additional search characters (paragraph 181, lines 5-9).

Ortega and Gross do not explicitly teach the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern. Anick does teach this limitation at (Figure 2 and column 8, lines 31-51, automatically provide user with a set of candidate terms which may be used as addition or replacement of initial query. Initial query of SPACE SHUTTLE returns a set of candidate terms such as CHALLENGER DISASTER.) It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross with the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern to build an improved query without analyzing documents within the initial group of ranked documents as described by Anick at column 8, lines 40-45.

Ortega and Gross and Anick do not explicitly teach a visual indicator that indicates when the query result list is updated. Van Vleet does teach this limitation (paragraph 12, 30 as highlighting the updated search results, Figure 3: “new search results since”) to personalize search result items. It would have been obvious to a person of ordinary skill in the art at the time of the invention was made to modify Ortega and Gross and Anick with a visual indicator that indicates when the query result list is updated to personalize search result items as described by Van Vleet (paragraph 12).

**As per claim 27**, same as claim arguments above and Ortega teaches:

further comprising a user selectable search icon for manually executing a query defined by characters in the query entry text box (Figure 2A, Ref. No. 66).

**As per claim 28**, same as claim arguments above and Ortega teaches:

wherein the query replacement option list is semi-transparent (Figure 2A, Ref. No. 62).

.

**10. Claim 4 , 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ortega and Gross and Anick as applied to claims 1 ,13 above and further in view of US Patent Number 6,006225 issued to Dwayne E. Bowman et al (“Bowman”).**

**As per claim 4, 16** same as claim arguments above and Ortega and Gross and Anick do not explicitly teach further comprising tracking results selected by one or more users

Art Unit: 2167

and adjusting an order of the updated query result list based on a history of results previously selected by the one or more users . Bowman does teach this limitation at column 7, lines 45-50 to produce a successful query result. It would have been obvious to a person of ordinary skill in the art at the time of the invention was made to modify Ortega and Gross Anick with tracking results selected by one or more users and adjusting an order of the updated query result list based on a history of results previously selected by the one or more users to produce a successful query result as described by Bowman (column 2, lines 44-46).

**As per claim 16**, same as claim arguments above and Ortega and Gross and Anick do not explicitly teach tracking results selected by one or more users and adjusting an order of the updated query result list based on a history of results previously selected by the one or more users. Bowman does teach this limitation at column 7, lines 45-50 to produce a successful query result. It would have been obvious to a person of ordinary skill in the art at the time of the invention was made to modify Ortega and Gross and Anick with tracking results selected by one or more users and adjusting an order of the updated query result list based on a history of results previously selected by one or more users and adjusting an order to produce a successful query result as described by Bowman (column 2, lines 44-46).

Art Unit: 2167

**11. Claim 29 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ortega and Gross and Anick in view Van Vleet as applied to claims 25 above, and further in view of US Patent Application Publication Number 2006/0129915 issued to Ning-Ping Chan (“Chan”).**

**As per claim 29**, same as claim arguments above and Ortega and Gross and Anick in view of Van Vleet do not explicitly teach wherein the query result list is animated for a predetermined period of time after the query result list is updated. Chan does teach this limitation at (paragraph 54, blinking search results) to provide a visual cue. It would have been obvious to a person of ordinary skill in the art at the time of the invention was made to modify Ortega and Gross and Anick in view of Van Vleet with teach wherein the query result list is animated for a predetermined period of time after the query result list is updated to provide a visual cue as described by Chan (paragraph 114).

**12. Claim 11, 30-32, are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent Number 6,564,213 issued to Ruben E. Ortega et al (“Ortega”) and US 2004/0143564 issued to William Gross et al. (“Gross”) and US Patent 6,947,930 issued Peter G. Anick et al (“Anick”) in view of in view of US Patent Application Publication Number 2003/0182463 issued to Jeffery W. Valk (“Valk”).**

**As per claim 11**, same as claim arguments above and Ortega and Gross and Anick do not explicitly teach in response to a change in a connection speed at a client-server connection ... to occur more frequently as the connection speed increases. Valk does

Art Unit: 2167

teach this limitation (paragraph 59, as connection speed limits ability to provide information such as dialup versus high speed and it is desirable to limit the amount of information sent to what is needed to perform complex tasks, can run quickly even in the most remote locations on low-bandwidth for smaller companies, yet remain robust enough to handle the complicated needs facing multi-billion dollar companies. It would have been obvious to a person of ordinary skill in the art at the time of the invention was made to modify the datasets (defined query related character patterns) of Ortega and Gross and Anick with in response to a change in a connection speed at a client-server connection ... to occur more frequently as the connection speed increases to perform complex tasks, can run quickly even in the most remote locations on low-bandwidth for smaller companies , yet remain robust enough to handle the complicated needs facing multi-billion dollar companies as described by Valk (paragraph 14, lines 19-26).

**As per independent claim 30** Ortega teaches:

- a) a user input device enabling input of query defining text characters (Figure 2A, search box, Ref.No. 60);
- b) a display (Figure 1);
- c) a data content that is searchable (column 2, lines 10-15, searchable database);  
a network connection for accessing at least a portion of the data content (column 2, lines 10-15);
- d) a memory in which machine instructions are stored (Figure 1);
- e) a processor that is coupled to the user input device, to the display, to the data

Art Unit: 2167

content, to the network connection and to the memory, the processor executing the machine instructions to carry out a plurality of functions (Figure 1), including:

i) defining one or more query related character patterns that do not include an explicit indicator of query submission (column 2, lines 6-8, generating auto completion strings datasets);

ii) monitoring entry of query defining characters by a user to detect entry of a defined query related character pattern (column 5, lines 27-29, query entered and suggested auto completion strings (character pattern) are displayed);

providing the user with query replacement options each related to the detected defined query character pattern without requiring the user to provide the explicit indicator of the query submission ( Figure 2A, Reference No. 62 , auto completion strings (replacement options), Figure 2A- 2B and column 5, lines 23-36, Figure 2A displays the auto completion strings (replacement options) for “SO” and at Figure 2B the display shows the incrementally updated auto completion strings (replacement options) for “SONY” and column 5, lines 46-51, user initiates search without moving stylus);

changing the defined query related character patterns (column 2, lines 35-37, as datasets (defined query related character patterns) are customized for users or user groups and column 3, lines 42-50 teaches a variety of devices such as PDA and conventional PCs and column 4, lines 34-44, as downloading new datasets (defined query related character patterns).

Ortega does not explicitly teach searching the data content and providing the user with an updated query result when a ... query ... is detected without requiring the user to provide the explicit indicator of query submission. Gross does teach this limitation (paragraph 10, lines 6-11, as immediately after each character in a search string is entered by the user the user receives immediate feedback and paragraph 13, lines 4-14) to provide immediate feedback and so can decide on the desirability of entering additional search characters. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Ortega with searching the data content and providing the user with an updated query result when a ... query ... is detected without requiring the user to provide the explicit indicator of query submission to provide the explicit indicator of the query submission to provide immediate feedback and so can decide on the desirability of entering additional search characters (paragraph 181, lines 5-9).

Ortega and Gross do not explicitly teach the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern. Anick does teach this limitation at (Figure 2 and column 8, lines 31-51, automatically provide user with a set of candidate terms which may be used as addition or replacement of initial query. Initial query of SPACE SHUTTLE returns a set of candidate terms such as CHALLENGER DISASTER.) It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross with the one or more suggested query replacement options including

Art Unit: 2167

a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern to build an improved query without analyzing documents within the initial group of ranked documents as described by Anick at column 8, lines 40-45.

Ortega and Gross and Anick do not explicitly teach in response to a change in a connection speed at a client-server connection. Valk does teach this limitation (paragraph 59, as connection speed limits ability to provide information such as dialup versus high speed and it is desirable to limit the amount of information sent to what is needed to perform complex tasks, can run quickly even in the most remote locations on low-bandwidth for smaller companies, yet remain robust enough to handle the complicated needs facing multi-billion dollar companies. It would have been obvious to a person of ordinary skill in the art at the time of the invention to modify the datasets (defined query related character patterns) of Ortega and Gross and Anick with in response to a change in a connection speed at a client-server connection to perform complex tasks, can run quickly even in the most remote locations on low-bandwidth for smaller companies , yet remain robust enough to handle the complicated needs facing multi-billion dollar companies as described by Valk (paragraph 14, lines 19-26).

Art Unit: 2167

**As per claim 31**, same as claim arguments above and Ortega teaches:

wherein the searchable database resides on one or more remote computers and data used to define the one or more query related character patterns resides on a user terminal (column 3, lines 5-15, column 4, lines 36-40).

**As per claim 32**, same as claim arguments above and Ortega teaches:

wherein the data content includes data stored on a user hard drive, data stored on an intranet server, and data stored on an Internet server (column 3, line 25-35).

**13. Claims 33,34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ortega and Gross and Anick in view of US Patent Publication 2003/0225756 issued to Songqiao Liu ("Liu").**

**As per claims 34,34** same as claim arguments above and Ortega and Gross and Anick do not explicitly teach wherein the broadening suggestion further includes a broadening icon. Liu does teach this limitation (see Figure 2, BT (broadening icon)). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross and Anick with wherein the broadening suggestion further includes a broadening icon to automatically provide additional and meaningful search criteria to the search query as described by Liu at paragraph 0011.

**14. Claims 35-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ortega and Gross and Anick in view of in view of Van Vleet and further in view of US Patent Publication 2003/0225756 issued to Songqiao Liu ("Liu").**

**As per claims 35-36** same as claim arguments above and Ortega and Gross and Anick in view of Van Vleet do not explicitly teach wherein the broadening suggestion further includes a broadening icon. Liu does teach this limitation (see Figure 2, BT (broadening icon)). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross and Anick in view of Van Vleet with wherein the broadening suggestion further includes a broadening icon to automatically provide additional and meaningful search criteria to the search query as described by Liu at paragraph 0011.

**15. Claims 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ortega and Gross and Anick in view of in view of Valk and further in view of US Patent Publication 2003/0225756 issued to Songqiao Liu ("Liu").**

**As per claim 37** same as claim arguments above and Ortega and Gross and Anick in view of in view of Valk do not explicitly teach wherein the broadening suggestion further includes a broadening icon. Liu dos teach this limitation (see Figure 2, BT (broadening icon)). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross and Anick in view of in view of Valk with wherein the broadening suggestion further includes a broadening icon to automatically provide additional and meaningful search criteria to the search

Art Unit: 2167

query as described by Liu at paragraph 0011.

### ***Response to Arguments***

16. Applicant's arguments with respect to claims 1,3-7,10-17,20-21, 23-25,27-39 have been considered but are moot in view of the new ground(s) of rejection.

Regarding Applicant's arguments that prior art of record does not teach "the one or more suggested query replacement options including broadening suggestion , the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern". Examiner finds Ortega and Gross do not explicitly teach the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern. Anick does teach this limitation at (Figure 2 and column 8, lines 31-51, automatically provide user with a set of candidate terms which may be used as addition or replacement of initial query. Initial query of SPACE SHUTTLE returns a set of candidate terms such as CHALLENGER DISASTER.) It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Ortega and Gross with the one or more suggested query replacement options including a broadening suggestion, the one or more suggested query replacement options beginning with a character pattern other than the query related character pattern to build an improved query without analyzing

Art Unit: 2167

documents within the initial group of ranked documents as described by Anick at column 8, lines 40-45.

17. Regarding Applicant's argument that prior art of record does not teach the query replacement option is semi-transparent. Examiner was unable to locate a written description of a query replacement option list is semi-transparent. Examiner has interpreted as a query replacement option list.

### ***Contact Information***

18. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Susan F. Rayyan whose telephone number is 571-272-1675. The examiner can normally be reached on M-F, 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cottingham can be reached on 571-272-7079. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
